

How do I clean Challenger?

Challenger's Endurepel Armour performance finish coating means that it has tough anti-stain, anti-bacterial, and anti-mildew properties, so mild soap and water will clean most stains. If needed you can also lift most stains with Alcohol-based or Peroxide-based cleaners. The use of a soft bristle brush can also be used for stubborn areas. When you're done, be sure to wipe remaining soap residue away with clean water and a soft cloth, and then dry the area with a separate cloth to help maintain the fabric's longevity.

If you need to use something stronger than soap, Challenger has been tested with common healthcare and other industry standard cleaners with great results using the following products: VIROX 5, OXIVIR PLUS, OXIVIR TB, OXIVIR TB WIPES, ACCEL TB, ACCEL PREVENTION, ACCEL PREVENTION WIPES, OASIS 146 AND BLEACH, (Dilution ratios must be followed) Rinse the area after with fresh water and wipe dry with a clean cloth.
